ALLEGATO I

Elenco delle sostanze pericolose

PREFAZIONE

Nota introduttiva

L'articolo 3 della legge n. 256/74 concernente la classificazione e la disciplina dell'imballaggio e dell'etichettatura delle sostanze e dei preparati pericolosi prevede l'esigenza di stabilire, ove del caso, una modalità di identificazione dei pericoli per la salute insiti nei preparati.

Il decreto 28 gennaio 1992 concernente la classificazione dei preparati pericolosi individua l'esigenza di aggiungere all'allegato I limiti di concentrazione per i preparati nonché un sistema per stabilire la relativa classificazione dal punto di vista tossicologico. Questo decreto stabilisce inoltre che, al momento della sua applicazione, i decreti concernenti i preparati (decreto 17 ottobre 1984) e i preparati pitture, vernici, inchiostri da stampa, adesivi e affini (decreto 18 ottobre 1984) non saranno più applicabili, in quanto saranno inclusi nel decreto generale sui preparati.

Di conseguenza, al fine di aggiungere i limiti di concentrazione all'allegato I del presente decreto, inizialmente per i solventi, le pitture, le vernici, gli inchiostri da stampa e gli adesivi, è necessaria una revisione della presentazione. La nuova presentazione mantiene tutte le caratteristiche della presentazione originaria con l'aggiunta di voci riguardanti la classificazione e i valori limite per i preparati, unitamente ai simboli e alle frasi relative ai rischi (frasi R) adeguati.

Numerazione delle sostanze dell'allegato I

Nell'allegato I, le sostanze sono elencate in funzione del numero atomico dell'elemento più caratteristico delle loro proprietà. La tabella A contiene un elenco degli elementi chimici disposti secondo il loro numero atomico. Data la loro varietà, le sostanze organiche hanno formato oggetto di una classificazione convenzionale a parte. La tabella B contiene la classificazione speciale delle sostanze organiche.

La numerazione delle sostanze è basata sull'impiego di una sequenza cifrata del tipo : ABC-RST-VW-Y, dove

ABC rappresenta sia il numero atomico dell'elemento chimico più caratteristico preceduto da uno o due zeri per completare la sottosequenza, sia il numero convenzionale della classificazione prescelta per le sostanze organiche;

RST rappresenta il numero progressivo delle sostanze considerate nella sottosequenza ABC;

VW rappresenta, per la sostanza così definita, una delle forme in cui essa viene prodotta o immessa sul mercato;

Y rappresenta la cifra di controllo (check-digit) di tutta la precedente sequenza calcolata secondo il metodo utilizzato dall'ISBN (International Standard Book Number).

Esempio: ABC-RST-VW-Y

n 017-005-00-9

Tale numerazione si trova a destra del nome di ogni sostanza. A sinistra si trova il numero CAS (Chemical Abstract Service) che permette di identificare la sostanza.

Il numero CEE utilizzato nell'allegato I per le sostanze pericolose notificate conformemente all'articolo 6 del D.P.R. 927/81 è identico al numero utilizzato nella lista europea delle sostanze notificate (ELINCS).

Questa numerazione è basata sull'impiego di una sequenza cifrata del tipo $\times \times \times . \times \times \times . \times$ e inizia a 400 010 9.

Presentazione delle sostanze dell'allegato I

La nuova presentazione include la classificazione delle sostanze secondo l'identificazione dei rischi in ogni classe di pericolo. La classificazione prevede una lettera che rappresenta il simbolo e/o le corrispondenti frasi indicanti i rischi attribuiti alla sostanza. Tale «lettera-simbolo» non viene riportata nella classificazione se la sostanza è stata considerata cancerogena, mutagena o teratogena. Includere la classificazione nell'allegato significa riconoscere la sua importanza non solo ai fini dell'etichettatura, conseguenza ovvia della classificazione, ma anche nel contesto più ampio della normativa derivata e delle misure di regolamentazione sulle sostanze pericolose.

Le indicazioni che riguardano la classificazione e l'etichettatura della sostanza sono le seguenti:

- a) il o i simboli, ove previsti, e l'indicazione/indicazioni di pericolo attribuiti in base all'allegato II;
- b) una serie di cifre precedute dalla lettera R che indica la natura dei rischi particolari di cui all'allegato III;
- c) una serie di cifre precedute dalla lettera S che indica i consigli di prudenza di cui all'allegato IV.

Le cifre che seguono le lettere R ed S sono separate o da un trattino orizzontale (-) o da una barra inclinata (/), che hanno il seguente significato:

trattino orizzontale: enunciazione separata dei rischi particolari (R) o dei consigli di prudenza (S);

barra inclinata: enunciazione combinata in una sola frase dei rischi particolari (R) o dei consigli di prudenza (S).

Le enunciazioni dei rischi particolari (R) figurano nell'allegato III e quelle dei consigli di prudenza (S) nell'allegato IV.

Note esplicative

Gruppi di sostanze

Quando talune categorie di sostanze dell'allegato I (vedi caso della denominazione generale del tipo «Composti di ...» o «Sali di ...») presentano la possibilità di una classificazione, la stessa va effettuata in funzione del più elevato grado di pericolo.

Per quanto riguarda in particolare i sali (indipendentemente dalla denominazione utilizzata nell'allegato I) essi sono presi in considerazione sia nella forma anidra sia nella forma idrata, a meno che non venga espressamente specificato il contrario.

Note esplicative relative all'identificazione e all'etichettatura delle sostanze

Per snellire al massimo la formulazione delle sostanze dell'allegato I sono state utilizzate alcune note sotto il numero EC di cui si troveranno di seguito i testi esplicativi.

Nota A:

Il nome della sostanza deve figurare sull'etichetta sotto una delle denominazioni di cui al presente allegato I.

Nell'allegato I è stata talvolta utilizzata la denominazione generale del tipo: «composti di ...» o «sali di ...». In tal caso, il fabbricante o qualsiasi altra persona che immette tale sostanza sul mercato è tenuto a precisare sull'etichetta il nome chimico corrispondente alla formula chimica:

Esempio: per BeCl_2 : cloruro di berillio

Nota B:

Talune sostanze (caso degli acidi, delle basi, ecc.) vengono immesse sul mercato in soluzione acquosa a concentrazioni varie e necessitano dunque di un'etichettatura diversa poiché presentano rischi diversi.

Per le soluzioni acquose, l'etichetta che figura nell'allegato I vale per la gamma di concentrazioni più elevata tra quelle presenti nella tabella dei limiti di concentrazione. Per le concentrazioni più basse, le frasi S sono scelte in funzione delle normali preparazioni.

Nell'allegato I, viene utilizzata una denominazione generale del tipo:

«acido nitrico ... %».

In tal caso, il fabbricante o qualsiasi altra persona che introduce tale sostanza sul mercato deve indicare sull'etichetta la concentrazione della soluzione in percentuale.

Esempio: acido nitrico 45 %

L'espressione «in percentuale» viene sempre intesa peso/peso, salvo altra espressa indicazione.

L'utilizzazione di altri dati (ad esempio, peso specifico, gradi Beaumé) o di frasi descrittive (ad esempio, fumante o glaciale) può essere tollerata.

Nota C:

Alcune sostanze organiche sono immesse sul mercato sia come isomero ben definito, sia sotto forma di miscela di più isomeri.

Pertanto nell'allegato I viene talvolta utilizzata una denominazione generale del tipo:

«xilenolo»

In tal caso, il fabbricante o qualsiasi altra persona che immette tale sostanza sul mercato, deve specificare sull'etichetta se si tratta di un isomero ben definito (a) o di una miscela di isomeri (b).

Esempi: a) 2,4 dimetilfenolo
b) xilenolo miscela di isomeri)

Nota D:

Talune sostanze che sono suscettibili di polimerizzarsi o di decomporsi spontaneamente si riscontrano generalmente sul mercato sotto forma stabilizzata. È sotto questa forma che esse sono elencate nell'allegato I della presente direttiva. Tuttavia tali sostanze sono a volte immesse sul mercato sotto forma non stabilizzata.

In questo caso, il fabbricante o qualsiasi altra persona che immette tali sostanze sul mercato deve specificare sull'etichetta il nome della sostanza seguito dalla dicitura «non stabilizzata».

Esempio: acido metacrilico (non stabilizzato)

Nota E:

Per sostanze che figurano nella nota E, le frasi R 20, R 21, R 22, R 23, R 24, R 25, R 26, R 27 ed R 28 e tutte le combinazioni di queste frasi di rischio devono essere precedute dalla parola «anche».

Esempi: R 23: «Anche tossico per inalazione»
R 27/28: «Anche altamente tossico a contatto con la pelle e per ingestione»

Nota F:

Questa sostanza può contenere stabilizzanti. Se lo stabilizzante modifica le caratteristiche di pericolosità della sostanza, quali specificate dall'etichetta prevista conformemente all'allegato I, l'etichetta deve essere predisposta secondo le regole per l'etichettatura dei preparati pericolosi.

Nota G:

Questa sostanza può essere immessa sul mercato in una forma capace di esplodere, nel qual caso dovrà essere valutata con metodi appropriati e dovrà essere provvista di etichetta che ne indichi le sue caratteristiche esplosive.

Limiti di concentrazione in funzione delle proprietà tossicologiche

Per quanto concerne l'aggiunta dei limiti di concentrazione dei preparati contenenti sostanze classificate, la nuova presentazione comprende anche una sezione che specifica i limiti, il simbolo corrispondenti e le relative frasi di rischio sulla tossicità per ogni gamma di concentrazione.

Se non specificato altrimenti, le concentrazioni indicate sono espresse in percentuale in peso della sostanza calcolato in riferimento al peso totale del preparato.

Qualora non si indichi alcuna concentrazione, i limiti di concentrazione da utilizzare nell'applicazione del metodo convenzionale di valutazione dei rischi per la salute sono indicati nell'allegato I del decreto ministeriale 28 gennaio 1992.

Note esplicative concernenti l'etichettatura dei preparati

Per snellire al massimo la formulazione delle sostanze dell'allegato I, sono state utilizzate diverse note sotto ai limiti di concentrazione di cui si troveranno di seguito i testi esplicativi.

Noti 1:

Le concentrazioni indicate sono espresse in percentuale del peso dell'elemento metallico calcolato con riferimento al peso totale del preparato.

Nota 2:

Le concentrazioni degli isocianati rappresentano in percentuale in peso del monomero libero calcolato in riferimento al peso totale del preparato.

Nota 3:

Le concentrazioni sono espresse in percentuale del peso degli ioni cromo dissolti in acqua, calcolato in riferimento al peso totale del preparato.

Nota 4:

Per le sostanze dell'allegato I così identificate, le concentrazioni si intendono per soluzioni acquose. Tuttavia, la concentrazione indicata si riferisce al peso della sostanza in questione calcolato in percentuale del peso totale del preparato.
